

MULTIVENT Feature Inventory

Implemented mobile, web, data, operations, and AI capabilities

This document consolidates the features currently implemented in the MULTIVENT mobile application, staff web operations console, Supabase database migrations, Edge Functions, and machine-learning integration.

1. Accounts and Access

- Mobile onboarding
- Client registration
- Service-provider registration
- Email verification using a six-digit code
- Email and password login
- Google sign-in
- Forgot-password and password-reset flow
- Change-password feature
- Role-based routing after login
- Editable account information
- Profile-photo upload
- Account approval, rejection, suspension, and reactivation states
- Provider application correction and resubmission
- Secure sign-out

Supported Roles

- Client
- Service Provider
- Event Coordinator
- Assistant
- Customer Service
- Admin
- Superadmin

Internal staff and Event Coordinators are created or managed through the staff operations console rather than public self-registration.

2. Client Event Planning

- Create and save an event
- Wedding, pre-wedding, and post-wedding event types

- Event name, theme, date, time, guest count, venue, and location details
- Resume an unfinished event draft
- Planning progress and next-step tracking
- Start a new event while another draft exists
- Budget allocation by service category
- Priority-based budget distribution
- Remaining-budget tracking
- Budget-versus-selected-services comparison
- Event ledger and expense overview
- Automatic synchronization of a marketplace venue with event venue details

3. Service Marketplace

- Browse all available event services
- Browse services by category
- Search and filter services
- Service categories including:
 - Attire
 - Florists
 - Catering
 - Venues and Estates
 - Sound and Lights
 - Photography
 - Host/Emcee
- Detailed provider and service profiles
- Service cover photos and galleries
- Base prices and pricing units
- Pricing notes and inclusions
- Provider-created packages
- Packages composed from multiple provider-owned services
- Percentage or fixed-value package discounts
- Provider-price, platform-commission, and client-facing-total calculation
- Category-specific listing information
- Catering options for plated, buffet, and packed meals
- Venue capacities, spaces, facilities, availability, and operating details
- Real customer ratings and rating distributions
- AI-generated positive and negative feedback summaries
- Expandable verified customer comments
- Marketplace visibility limited to approved, available, and non-deleted services

4. Service Selection and Booking

- Select individual services or packages
- Selected-services summary
- Remove or replace selected services
- Save selections against an event
- Provide service-specific instructions
- Catering dietary, menu, and serving instructions
- Venue setup and access instructions
- Photography shot-list and style instructions
- General provider notes
- Dedicated Event Coordinator instructions
- Real provider availability checking
- Operating-hours checking
- Existing-booking conflict detection
- Conflict and no-conflict result screens
- Alternative-provider selection when conflicts occur
- Booking request generation for each selected service
- Real-time booking-status updates
- Booking confirmation
- Booking details and lifecycle tracking
- Client cancellation with a reason
- Client-requested date and time changes
- Rescheduling validation against provider availability and conflicts
- Provider and coordinator release after cancellation

5. Payments and Financial Handling

- Deposit and full-payment options
- Thirty-percent deposit calculated from the provider's amount
- E-wallet payment records
- Payment references and transaction details
- MULTIVENT commission displayed separately from the provider price
- Commission added above the provider-entered price
- Booking-time price and commission snapshots
- Payment-derived financial ledger
- Provider-balance tracking
- Direct-to-provider balance acknowledgements
- Automatic calculation of the remaining provider balance
- Automatic calculation of outstanding MULTIVENT commission
- Historical protection for bookings made under the older deduction model
- Client event ledger

Current limitation: The payment workflow and records are implemented, but the current code uses a generated demo payment reference rather than a confirmed external payment-gateway integration.

6. Client Booking Management

- Upcoming and historical bookings
- Event-level booking progress
- Per-service booking status
- Provider and package details
- Payment information
- Provider messaging from a booking
- Booking, payment, message, review, and assignment notifications
- Active-event booking cancellation
- Date-and-time change requests
- Feedback submission after event completion

7. Messaging and Notifications

- Conversation list
- Conversation search
- Client-to-provider messaging
- Coordinator-related messaging
- Booking-aware chat context
- Message delivery states:
 - Sending
 - Sent
 - Delivered
 - Read
 - Failed
- Booking notifications
- Payment and payout notifications
- Review notifications
- Coordinator-assignment notifications
- Remittance notifications
- Notification-based navigation to related records

8. Reviews, Feedback, and AI Sentiment Analysis

- Required 1-to-5-star rating for every completed service
- Optional written feedback for each service
- Separate Event Coordinator rating and feedback
- One atomic feedback submission per completed event
- Real provider-rating averages

- Five-to-one-star distribution
- Verified-review display
- Provider review-performance dashboard
- Positive feedback grouped under **What clients loved**
- Negative feedback grouped under **What could improve**
- Latent Dirichlet Allocation topic inference
- Multilingual semantic embeddings
- FAISS retrieval of related labeled examples
- OpenAI-based structured positive-or-negative classification
- Filipino, Hiligaynon, English, and code-switched feedback support
- Stored sentiment score, confidence, language, topic, reason, and retrieval provenance
- Cached AI feedback summaries
- Incremental summary updates when new feedback arrives
- Retry workflow for pending, failed, or stale sentiment jobs
- Staff supervision of failed analyses
- Separation of star ratings from text-sentiment decisions

9. Service-Provider Workspace

- Provider dashboard
- Booking, service, and earnings summaries
- Provider application and approval lifecycle
- Commission-agreement acceptance and version tracking
- Service-listing creation
- Listing drafts
- Service image uploads
- Pricing models, units, and notes
- Category-specific service information
- Standalone and composed packages
- Service and package editing
- Listing review before submission
- Submission for staff moderation
- Revised-listing comparison with the last approved version
- Live or Not Live control for approved services
- Recoverable service and package removal
- Preservation of deleted listings referenced by historical bookings
- Separate active-services, packages, and removed-listings collections
- Availability calendar
- Provider operating hours
- Unavailable-date blocking
- Event-grouped booking requests

- Individual accept or decline actions for each service
- Decline reasons
- Provider confirmation notes
- Relevant client instructions
- Service completion on or after the event date
- Automatic event completion after all active providers finish
- Provider messages and notifications
- Review and performance monitoring
- Live earnings dashboard
- Earnings trends and transaction history
- Payout-account management
- Balance-validated payout requests
- Transaction-detail view
- Provider profile and security settings
- Customer-support access

10. Event Coordinator Workspace

- Automatic coordinator assignment based on:
 - Active account status
 - Availability records
 - Leave and unavailable dates
 - Schedule overlap
 - Preparation or travel buffer
 - Workload limits
 - Least-workload fairness
 - Previous declined assignment attempts
- Coordinator invitation and confirmation
- Assignment acceptance or rejection
- Automatic retry after a declined invitation
- Automatic rematching after new leave or schedule conflicts
- Manual pending-assignment queue when no coordinator is available
- Coordinator dashboard
- Active-event, attention-task, and completed-task totals
- Upcoming assigned-event summary
- Client, schedule, venue, and provider information
- Assigned-services visibility
- Client instructions
- Provider contact information
- Event-task creation
- Task notes and due dates

- Open, due-now, and all-task filters
- Task completion and reopening
- Pull-to-refresh and proper empty and error states
- Coordinator-aware notifications
- Event-level remittance notifications
- Per-service remittance breakdown
- Client-submitted coordinator reviews

11. Customer Support

Client and Provider Features

- Create account, booking, payment, system, technical, or general support tickets
- Optionally link a ticket to an event or booking
- View submitted tickets and their statuses
- View the support conversation
- Reply to open tickets

Customer Service Features

- Search the ticket queue
- Filter by status, priority, and assignment
- Assign, reassign, or unassign tickets
- View limited ticket-related user, event, booking, and payment context
- Change ticket priority
- Move tickets through open, in-progress, waiting, resolved, and closed states
- Send public replies
- Add private internal notes
- Notify users and assigned staff
- Automatically reopen resolved tickets when the user replies
- Track first-response, latest-message, resolution, and closure times

12. Staff Web Operations Console

- Secure staff login
- Responsive desktop and mobile administration interface
- Permission-aware navigation
- Protected pages and backend authorization
- Operational overview
- User directory
- Provider-application management
- Service-listing moderation
- Events and bookings monitoring
- Payments monitoring

- Reviews and sentiment-analysis monitoring
- Coordinator workforce management
- Customer-support queue
- Revenue reporting
- Cash-flow reporting
- Remittance management
- Staff and permissions management
- Audit-log viewer
- System settings

13. Provider and Service Moderation

- Full provider-application inspection
- Business, applicant, contact, agreement, and account-standing information
- Provider application approval or rejection
- Mandatory provider-rejection reasons
- Reviewer and review-time tracking
- Provider decision notifications
- Provider-application search and filtering
- Submitted service details and photos
- Service search
- Category and moderation-status filters
- Service-listing approval or rejection
- Mandatory correction reason when declining a service
- Before-and-after comparison for revised services
- Prevention of service approval when the provider is not verified or enabled
- Audited moderation decisions

14. Business Analytics

- Total users, providers, services, events, and bookings
- Booking-status distribution
- Event-status distribution
- Gross booking value
- Commission revenue
- Provider net amounts
- Current-month versus previous-month comparisons
- Twelve-month booking trends
- Twelve-month event trends
- Twelve-month gross-value trends
- Twelve-month commission trends
- Service-category demand

- Event-type performance
- Verified-provider performance
- Review count and average rating
- Booking and completion rates
- Recent booking activity
- Permission-scoped operational queues
- Ratios calculated from real database records rather than fabricated uptime values

15. Revenue, Cash Flow, and Remittances

- Configurable commission rate
- Historical commission-rate preservation
- Gross-value, commission, and provider-net reporting
- Payment-channel summaries
- Provider-contribution summaries
- Date-range filters
- Transaction classifications and statuses
- Received, released, and net-movement totals
- Completed-event selection for remittance
- One-service or all-services remittance recording
- Partial remittance handling
- Server-calculated expected remittance
- Over-remittance prevention
- Coordinator attribution
- Recorder and reviewer attribution
- Remittance verification or dispute
- Required dispute reasons
- Coordinator notifications after recording, verification, or dispute
- Automatic revenue recognition only after valid verification

16. Roles and Permission Management

- Database-driven role-based access control
- Default permissions by role
- Additional user roles
- Per-user permission overrides
- Inherit, explicitly allow, or explicitly deny access
- Human-readable permission bundles
- Superadmin full-access protection
- Assistant and Customer Service account creation
- Event Coordinator account creation
- Superadmin-only Admin creation

- Optional permission overrides during account creation
- User account-standing management
- Feature-level permissions for:
 - Analytics
 - Users
 - Providers
 - Services
 - Coordinators
 - Events
 - Payments
 - Revenue
 - Cash flow
 - Remittances
 - Support
 - System settings
 - Audit history

17. Security and Audit Controls

- Supabase Row-Level Security
- Ownership-scoped client data
- Provider access restricted to owned listings and bookings
- Coordinator access restricted to assigned events
- Customer Service access limited to ticket-related information
- Protected security-definer RPCs
- Server-side permission validation
- Secure Edge Function secrets
- No model URL or service-role key stored on the mobile device
- Append-only audit history for application roles
- Auditing of:
 - Account-status changes
 - Permission changes
 - Provider and service decisions
 - Coordinator assignments
 - Support lifecycle actions
 - Commission settings
 - Payment-ledger changes
 - Remittances
- Redaction of contact details, message bodies, payment references, and private notes from automatic audit snapshots
- Revoked direct browser writes to permissions, settings, financial records, remittances, and audit logs

Not Implemented or Intentionally Deferred

- Guest-list management is still a placeholder.
- The proposed redesigned budget-allocation slider is intentionally deferred pending an approved UI/UX design.
- Internal staff do not have full mobile workspaces; their mobile routes direct them to the web operations console.
- Production availability depends on applying the corresponding database migrations, deploying the Edge Functions, and keeping the external sentiment service online.
- The machine-learning evaluation still needs a representative, manually labeled MULTIVENT feedback dataset before sentiment should influence rankings, penalties, or automated business decisions.
